Abstract (en)
[origin: EP1707523A1] Thread is unwound from a master spool (3), led through a thread run (10) and wound by a rotary thread carrier (7) that rotates at a take-up speed. The rewinding speed control amount of the thread in the thread run to a take-off supplier (17) is preferably determined by the master spool that specifies a take-off speed. A control module (19) controls the rewinding speed based on the specified take-off speed.
