Abstract (en)  
[origin: WO2006106138A1] The invention relates to a method for producing an aqueous polymer dispersion. According to said method, in a first reaction stage, a diamine compound and a dicarboxylic acid compound are reacted to form a polyamide in an aqueous medium in the presence of an enzyme and a dispersant and optionally an organic solvent that is poorly soluble in water and/or an ethylenically unsaturated monomer. In a second reaction stage, an ethylenically unsaturated monomer is then subjected to radical polymerisation in the presence of said polyamide.
