Abstract (en)
[origin: WO2006097383A1] The invention relates to an assembly, which is a composite consisting of an end shield (6) and a front wall (4). The size and shape of the end shield (6) are adapted to the inner face of the front wall (4). Both parts are dimensioned and formed in such a way that they can be interconnected in a fixed manner to form a stable composite resembling a sandwich assembly. The joint surfaces between the front wall (4) and the end shield (6) lie on perpendicular planes and extend for some distance. The construction and connection of the individual parts (4) and (6) of the composite give the front region of the tumble dryer (1) a high degree of rigidity, which obviates the need for additional reinforcement measures. The assembly thus saves material and mounting costs and resources.
