Abstract (en)
[origin: EP1712718A1] The device has at least two metal profiles (2,16) at a distance from each other and metal connecting parts (3). The metal profiles each have facing end wall sections (4) to which the connecting parts are attached, preferably welded, and each connecting part has a side section with end sections. The connecting part is attached to the end sections of the metal profiles in the area of its end section. An independent claim is also included for a method of manufacturing an inventive profile.
