Abstract (en)

[origin: WO2006109345A2] A fixing device (D) for panels (2) made, for example, of glass or the like by means of anchorage means with spherical joint, comprises at least one support equipped with means for fastening the edge of the panels (2), in which each panel to be fixed intersects, with its own thickness, a spherical surface of rotation of the spherical joint itself. In this way, it is advantageously possible to prevent any need to make holes in the panels (2) themselves.
