Abstract (en)
[origin: EP1708051A1] The mechanism has an energy source (24) and an adjustment system which permit programming a ringing time. A triggering system has a control unit (16) which controls the unlocking of the source and a cam (10) that is kinematically connected to the movement and carries out a turn in 24 hours. A ringing mechanism driven by the source has a hammer to hit a gong or a non resonant object. The control unit has an arm (18) that is terminated by a pin (14). The cam has a single notch (12) to receive the pin for driving the unlocking of the source.
