Abstract (en)

[origin: WO2006099384A1] Systems and methods are disclosed for providing sample prescriptions electronically and creating a complete data set of information regarding the life-cycle of the sample prescription. In one embodiment, a sample prescription system comprises a management module that stores files corresponding to sample prescriptions. Each corresponding file is linked to a unique sample code. The sample code and linked file together comprise an electronic history of the sample's life-cycle, which is built dynamically over time into a comprehensive code containing all information relevant to a prescribed sample and it's path to consumption.
