Abstract (en)

[origin: WO2006108989A2] The invention relates to a method for controlling the sending of an item of unsolicited voice information in a packet switching network of a transmitting entity to a receiving entity, characterized in that the item of unsolicited information is voice information, and the sending of the unsolicited information occurs over the course of a call that comprises a call setup phase during which at least one call signaling message is transmitted in the network followed by an established calling phase during which said item of unsolicited information is transmitted. The invention is also characterized in that it comprises: a detecting step over the course of said call of the unsolicited information. The invention advantageously comprises a reaction step triggered following the detection over the course of the call of the unsolicited information. The invention also relates to a system for controlling the sending of unsolicited information.
