Abstract (en)

[origin: EP1870238A1] Tempering system has a cooling unit to provide a desired temperature level for a supply circuit, which supplies a tempering medium to a component. A cooling process (87) with a fluid circuit cools the medium to the level below an ambient temperature. A cooling process (86) with a free cooling device cools another fluid circuit using surrounding air. The supply circuit is thermally coupled to the processes by heat exchangers.
