Abstract (en)
A process for surface decoration comprises the steps of applying a thermosetting resin (2) to a surface (1) to be decorated, preparing a support (3) provided with a waxy layer (4) and with at least one decorative layer (5) superposed on said waxy layer (4), applying the support (3) to the surface (1) bringing the decorative layer (5) into contact with the thermosetting resin (2). The surface (1) and support (3) are heated until the decorative layer (5) is detached from the support (3) and adhesion of the decorative layer (5) to the thermosetting resin (2) occurs, as well as subsequent polymerisation of the resin (2) together with said decorative layer (5).
