Abstract (en)  
[origin: WO2006105096A2] A back support for supporting at least a portion of the back of a user is provided. The back support includes a backrest and an inter-scapular bolster. The backrest has a lumbar support that is shaped to engage the lumbar region of the user and to urge the lumbar spine of the user towards a neutral curve. The inter-scapular bolster has a bolster body. The bolster body is connected to the backrest and is positioned for engaging the user between the scapulae, wherein the bolster body has a bottom that is positioned to engage the user no lower than approximately the lower edge of the T8 vertebra of the user.
