Abstract (en)
[origin: WO2006106256A2] The invention concerns a dispensing head designed to be mounted on the actuating rod (43) of a fluid product dispensing member (4), the rod being reciprocatingly mobile along an axis (X), the head comprising a support surface (22) for moving the head and actuating the dispensing member, the head further comprising a dispensing nozzle (23) defining internally a nozzle channel (25) which emerges outwards at the dispensing orifice (26), said nozzle having an elongated configuration with one linking end connected to the rest of the head and a free end (24), the dispensing orifice being located proximate the free end, the dispensing orifice being located proximate the free end, characterized in that the dispensing orifice is provided with internal closure means (16) adapted to close selectively the dispensing orifice from inside.
