Abstract (en)
[origin: WO2006108064A2] A holder for a product is disclosed, the holder including a substrate separate from the product and a cling polymer layer attached to at least a portion of the substrate. The cling polymer layer has an outer surface defining a target area configured for releasably securing the product to the substrate, whereby the product may be repeatedly placed on the target area to secure the product to the substrate for handling as a unit. Related packages including one or more of such product are also disclosed. Adhesives may be utilized as well, as a supplement to the cling polymer, to provide additional securing force to hold the product to the substrate.
