Abstract (en)

[origin: WO2006111229A1] Disclosed is an add-on spout (10) for bottles (B), comprising a substantially cylindrical body that is provided with an inner wall (11) with thread-type profiles (13) or similar which cooperate with adequately embodied opposite profiles when being mounted on a bottleneck (N). The add-on spout (10) is vertically adjusted in an axial direction by relatively twisting the add-on spout (10) and the bottle (B). A sealing member (16) can be moved from a closed position into an open position and vice versa by means of said vertical adjustment in the axial direction. The inventive add-on spout (10) is embodied monolithically and is equipped with a sealing member (16) which is configured monolithically together with the add-on spout (10) and rotates along with the add-on spout (10) during the vertical adjustment in the axial direction so as to seal directly opposite an inner wall (I) of the bottleneck (N).
