Abstract (en)

[origin: WO2006111669A1] The invention concerns a pump for fluid product dispenser comprising a bottle (1) designed to contain said product, said bottle having an upper opening (2) delimited by a neck (3) wherein the pump is inserted, said pump comprising a generally cylindrical pump shell (7) delimiting a compression chamber, the pump shell (7) extending radially through an annular assembling flange ring (16) made in a single-unit with the upper part of the shell, said flange ring having a lower surface designed to be urged into deforming sealed contact on a support zone provided on the upper part of the neck (3): The invention also concerns a dispenser comprising such a pump.
