Abstract (en)

[origin: WO2006112611A1] Disclosed hereinafter is a laundry device. More particularly, a washing machine comprises a steam generation unit (150) installed therein to generate and supply steam to an outside of the washing machine or to laundry-receiving device (500) to remove wrinkles on laundry by using the steam supplied from the steam generation unit (150), and a method for controlling operation thereof. A method for controlling the washing machine is also disclosed. The washing machine comprises a steam generation unit (150) to generate steam, and an steam outside-supplying pipe (180) connected with the steam generation unit to supply the steam to an outside of the washing machine.
