Abstract (en)

[origin: WO2006111677A1] The invention concerns a fixing device for mounting an injector-holder (2), source of vibrations, on an internal combustion engine, capable of receiving and transmitting the vibrations, by means of a fixing element (1). The fixing device comprises means for compensating (B) the vibrations produced in the form of a first element (M) forming a sliding weight and at least a second element (R1) forming a spring linking the sliding weight (M) to the fixing element (1).
