Abstract (en)

[origin: WO2006105923A2] The invention relates to a device for igniting combustible means, especially solid combustibles such as wood, charcoal, and similar. Said device comprises a pressurized receptacle that is filled with a combustible medium, a spring-loaded actuating valve which selectively opens and closes a discharge port of the receptacle, preferably by applying pressure with a fingertip, and a top part that is joined to the discharge port and is provided with a tubular extension having an adequate length.
