Abstract (en)

[origin: WO2006097280A1] The invention relates to a transparent assembly for a display device, in particular for an analogue and/or digital display. Said assembly comprises a fibre-optic assembly, which transmits light from one entry surface to an exit surface. Regions, in particular pixels of an image field lying in front of the entry surface, are visible on the exit surface of the fibre-optic assembly and the regions, in particular pixels, which are visible on the exit surface of the fibre-optic assembly are spatially offset by at least an offset (V) in relation to the image field.
