Abstract (en)
[origin: WO2006113711A2] The present invention relates generally to methods and systems for the wireless real time transmission of data from a source to a monitor. The present invention further relates generally to the substantially automatic configuration of wireless devices. In an exemplary embodiment, the present invention is a method of capturing video and audio data from a source and wirelessly transmitting the data comprising the steps of playing the data, capturing the video data using a mirror display driver, capturing the audio data from an input source, compressing the captured audio and video data, _and transmitting the compressed audio and video data using a transmitter.
