Abstract (en)

[origin: EP1872836A2] The board has a profile rail system including two profile rails (14a, 14b) for fastening a binding. The rails respectively form an undercut at profile rail longitudinal sides with an upper bar. The undercut is gripped and/or encompassed by locking sections in the binding that is fastened at the system, where the sections are provided at a binding unit. The locking sections have recesses (16, 17) at the rails, respectively, such that the binding is locked by attaching on the system and by subsequently adjusting in a profile rail longitudinal direction. The rails are made of plastic.
