Abstract (en)
ADAPTABLE CAPSULE DEVICE. It is a 'one-piece-only' device and has the advantage of adapting the 'mouthpieces'; you only have to change the adaptable capsule in case the measure of the rivets and screws had different measure. By this way, you only have to use one 'mouthpiece', with the possibility of exchanging it for other different adaptable capsules and get large series of riveting without skipping the other measures (other kind of rivets and screws); you will get the incapsule, we mean you could avoid skiping rivets with different measure only changing the adaptable device, to avoid forgetting any screw during the process. This is a disposable device. To clean the old ones, you had to use safety gloves, rags, plaster casts (masks), abrasive fluids... So, it is cheaper riding it of than reusing it. Materials like sealing materials, silicones, plastics... when they get dried they don't pollute the environment.
