Abstract (en)

[origin: EP1873080A1] The package (3) has a projection enclosed around an element e.g. plaster roller, and a surface element (1) with an opening. Another surface element is formed as one-piece and has a holding section partly extending over the opening, where the holding section has a tearing edge (11). The surface element has connecting sections (18, 19) that connect attachment sections (8, 9) of the element (1) and the holding section with each other. The sections (18, 19) run bendingly to the plane and the holding section, and the edge runs parallel to the plane and the element (1).
