Abstract (en)

[origin: EP1873086A1] The carrier (10) has inherent deformability with a closed outer contour (11), when in the unloaded state. The deformation is resilient. A gel, foam or fluid is located within the closed outer contour. Individually-moveable carrier supports are arranged within the closed outer contour. They are formed by, or include, springs. They have projecting teeth and comprise piezo-elements. The carrier supports are arranged on the support system (9) such that they can be moved entirely or partially with horizontal components of motion.
