Abstract (en)

[origin: EP1873105A2] A method for detecting dirt of a plurality of detection heads of yarn clearer which are mounted on a unit system comprising a plurality of spindles and which monitor yarn clearer of yarn quality and the like of each spindle in which whether data change of yarn thickness (δ) and/or yarn uniformity degree (CV%) obtained based on yarn unevenness signal output from a yarn clearer of predetermined spindle are attributed to intrinsic property of the monitored yarn or attributed to dirt of the above mentioned detection head is judged based on a relation between yarn thickness data and/or yarn uniformity degree (CV%) obtained based on yarn unevenness signal output from a yarn clearer of the other spindle.
