Abstract (en)

[origin: EP1873310A2] Profile of a cross frog of a shunt has a ramp which rises in a first region after the tip of the cross frog and remains parallel to the upper edge of a wing rail in a connected second region and is molded to the point of the transition of the wheel. The ramp rises ins third region up to the end of the ramp. Preferred Features: The end of the ramp is pushed behind in the direction of travel. The rise of the individual regions of the ramp is linear.
