Abstract (en)  
The invention relates to an outlet connectable to the underside of a liquid container such as a wash-basin or a bath, comprising: - a housing having on the top side an opening for connection to the liquid container; - a valve for closing the outlet, which valve comprises an operating pin extending downward in the housing, wherein - the housing has a lateral outlet opening for lateral discharge of water. The invention further relates to a combination of a liquid container, such as a wash-basin or a bath, and an outlet according to any of the foregoing claims, wherein the liquid container comprises: - a bottom and a standing peripheral edge; and - an outlet opening arranged in the bottom; wherein the opening on the top side of the housing connects to the outlet opening of the liquid container and wherein the valve can be carried into the outlet opening by operating the operating pin for the purpose of closing the outlet opening.
