Abstract (en)

[origin: EP1873346A2] The device has a linear running carrier element (40) formed as a bar, and a guiding device that is fastened at the carrier element, where the carrier element has a fastening element (50) e.g. hook-and-loop tape. The element is arranged damage-free and reversibly detachable at a frame (21) of a building opening (25) e.g. door, by the fastening element, where the carrier element has a larger contact with the frame. The frame is integrated in the opening and a front end element (10) partially covers the frame and/or a sheet, where the end element is connected over the guiding device.
