Abstract (en)
[origin: EP1873451A2] The system (1) has a fuel unit (10) and a downstream system for evaluation of thermal energy generated in the fuel unit, where incontinence system wastage is provided as fuel. A power conditioning unit is provided for the incontinence system wastage of a fuel feeding unit. A separation unit (5) separates a baggy-like package with the system wastage. A fuel adding device is provided in a combustion chamber (12) of the system for mechanical processing of the fuel. An additional unit adds the further fuel to the system wastage. An independent claim is also included for a method for disposal of incontinence system wastage.
