Abstract (en)

[origin: EP1873808A1] The device has two bipolar outage modules (2, 3) for supporting four upstream terminals to which the outage modules are electrically connected. A differential protection module (1) supports downstream terminals (10-13) to which the differential module is electrically connected. The outage modules and the differential module are connected to each other at final assembling of the device. The downstream terminals are fixed on a support (14) having connecting pads.
