Abstract (en)
[origin: US2006230488A1] An equestrian riding garment includes a pair of pants of elastic material having inner leg expanses and a butt expanse of durable material affixed to corresponding regions thereof, the inner leg and butt expanses being made of real or faux leather that is perforated to increase air permeability and to promote friction with a saddle. Preferably, the butt expanse is bifurcated into left and right sub-pieces corresponding with the equestrian's left and right buttocks. Optionally, a knee region of the inner leg expanses is articulated, as by segmenting. Optionally, an abdominal and/or inner calf region of the pair of pants includes an inner support layer of extra fabric for more flattering fit.
