Abstract (en)
[origin: WO2006114159A1] The invention relates to a hair-styling device which comprises a handle (5) and at least one heating part (3) which is used to heat the hair. The hair is placed between the heating part (3) and the styling part (2), and said device also comprises a heat adjusting element by means of which the operational temperature of the heating part (3) can be adjusted to an operational temperature which is fixed in a durable manner. The hair-styling device also comprises an actuation element (7) which is used to activate an operational mode, wherein the operational temperature of the heating part (3) can be adjusted to a higher temperature. Preferably, the hair-styling device changes (1) for a predetermined period of time in the operational mode at an increased operational temperature of the heating part (3), by actuating the actuating means (7).
