Abstract (en)

[origin: WO2006077267A1] The invention relates to a method for adjusting a digital dental prosthesis (5) that is provided as a 3D data record and has been created based on a 3D data record of a preparation zone (1) which encompasses the actual preparation point (2) and at least one adjacent tooth (3, 4) thereto. In order to adjust the approximal contact between the dental prosthesis (5) and the adjacent tooth (3), a contact area (8) is defined on the adjacent tooth (3), and the dental prosthesis (5) is automatically adjusted to said contact area.
