Abstract (en)
[origin: WO2006113951A1] The invention relates to a method for producing a lid (1) comprising an aid (5) for opening and closing containers (7). Said lid consists of a composite comprised of at least two layers, the composite layer facing towards the container (2) adhering more firmly to the container edge (7') than to the outer heat-resistant composite layer (3), in such a way that when said outer composite layer is removed, at least one opening (6, 6') is formed. One opening (6) is used, for example, for removing the contents and another opening (6') for the evacuation of air.
