Abstract (en)

[origin: WO2006100387A1] The invention concerns a railcar characterized by upper (9) and lower (10) running and transporting support frames wholly or partly mobile, between a lowered transporting position and a raised loading/unloading position, said support frames forming each a passage between railcars for the vehicles while they are being loaded/unloaded and a support for the vehicles in their transported position. The lower support frame (10) has a mobile central part (11) and the assembly of the two support frames is maintained by a railway carrier structure (14) with posts (15) and (16). The invention concerns the field of railway transport of road vehicles.
