Abstract (en)

[origin: WO2006117308A2] The invention relates to a connecting device between a wiper blade and a driving arm capable of driving the wiping of the wiper blade on a window or windshield. The inventive device is provided in the form of two plates (18, 19) that can be joined to one another and is characterized in that at least one of these two plates has fixing means (20) having the same axis of rotation (21) according to two distinct positions with regard to at least one of the two plates (18, 19). Advantageously, these fixing means (20) having the same axis of rotation (21) according to two distinct positions are provided in the form of a hole (25) in at least one of the two plates (18, 19).
