Abstract (en)

[origin: WO2006115443A1] A fastening bracket (1) for fastening an equipment detail to a roof including a mounting portion (2) for fastening to the roof, an attachment portion (3) for co-operation with the equipment detail and a deformation portion (4) for receiving, under deformation, loading forces above a certain level. The, mounting portion (2) as well as both the attachment portion (3) and the deformation portion (4) is included in one and the same elongated profile body, with the attachment portion (3) in use standing up forming an angle with the mounting portion (2) and the deformation portion (4) between these parts having a curved extension. The invention also concerns a snow-slide protection system.
