Abstract (en)

[origin: WO2006116780A1] The invention relates to a covering device for covering floors, which comprises a cover profile (1) which is provided with a foot area (2) which is used to secure the cover profile (1) to a maintaining element (5) and a cover flange (4) which protrudes on both sides from said foot area (2), and a compensation profile (7) which can be used when desired. Said compensation profile can be connected in a positive fit to the cover flange (4) by means of a groove-spring connection. In order to use the traditional cover profiles (1), the compensation profile (7) forms a receiving groove (9) for one of the free longitudinal edges (8) of the cover flange (4) for the groove-spring connection.
