Abstract (en)
[origin: WO2006111603A1] The invention relates to a movable scaffold (20) with one or more fixed work platforms (21), said scaffold having its frame element consisting of four upright tubular corner members (1) and tubular cross-members (2, 2a, 2b) connecting the same, each tubular corner member having its bottom end provided with a wheel (15) for allowing a displacement of the scaffold, and said scaffold being provided with elements for adjusting its height. Between each tubular corner member (1) and the wheel (15) at its bottom end are provided vertical adjustment elements (5) to enable an individual vertical adjustment of each wheel relative to its associated tubular corner member (1) while effecting a displacement of the scaffold (20), the scaffold being thus safely movable even on rough foundation.
