Abstract (en)

[origin: WO2006114076A1] The invention relates to an adjusting device which comprises, on a common carrier (10), a coupling device (9) which is coupled to the shooting simulator, an actuator (8) and a control and evaluation device (23) which is used to generate control signals for controlling the actuator (8), an optical channel which consists of a pivotable telescope (4) having an integrated target mark (17), beam deflecting means (5) which can form the target mark (17) in the eye of a shooter for the simultaneous visualisation of the target device and a surface receiving element (22) which comprises an imaging optical system, which forms, as a spot in the surface receiving element (22), the target mark (17) and the simulator beam which is oriented through the telescope (4) and which exits the shooting simulator.
