Abstract (en)  
[origin: EP1875826A1] The jewellery e.g. watch (5) includes an inner ring (2), intermediate ring (3) and outer ring (4) nested inside each other. The pivoting zones (9) vary the degree of nesting of the rings, by pivoting the ring relating to each other about a common axis. An indexing unit has pin secured to the inner ring for cooperating with the edge of an elongated aperture in the outer ring, so as to immobilize the rings in several relative positions such as nested position and tilted position.
