Abstract (en)
[origin: EP1875846A2] The nozzle has a suction head (5) movably mounted on a front section of a chassis (1) around a horizontal tilting axis (6) in a tiltable manner. A floor surface is formed by front and rear suction mouth edges (7, 7'), where distance between the horizontal tilting axis and the surface, is larger than 35 millimeter. The suction head is tilted in a contact position towards the front section of the chassis at a maximum fifteen degree with respect to a rest position. The front and rear suction mouth edges lie in a plane in the rest position of a contact point (13) of a roller (3).
