Abstract (en)

[origin: EP1876106A1] The combination (1) has base and auxiliary containers (2, 3) provided with ends (7, 8, 11, 12) and container bases (5,10). The base container has retaining units (14, 15) formed in an area of the bases through a lifting elevation (16). The auxiliary container has a locking recess (25) in an overlapping area (13). The recess forms another lifting elevation (26) on a side facing the base container. An enclosing unit (29) is formed by a mantel-shaped outer part (30). The unit extends between the elevation (26) and the unit (15) arranged at the base container on a side facing a base area.
