Abstract (en)
[origin: EP1876136A1] The supporting unit (2) has a sensor unit (4) for measuring a weight force that effects between a vehicle that is to be lifted and a bearing unit. The sensor unit outputs a signal, which is a characteristic of the weight force. A transmission unit outputs the characteristic signal or a signal that is derived from the characteristic signal. The transmission unit outputs the characteristic signal wirelessly to a receiving unit, where the supporting unit is removable from the bearing unit.
