Abstract (en)

[origin: WO2006114534A2] The invention relates to device for removably fixing a sleeve (5) to a cylindrical support shaft (3) of a printing machine. The inventive device is characterised in that: the inner face (5b) of the sleeve (5) comprises at least one cylindrical stiffened area (24); and the support shaft/sleeve assembly is equipped with (i) means which, in the operating position and under the action of means that supply a clamping force (21, 32, 32'), apply at least one pressing member (15, 30, 40) against the stiffened area (24) in order to render same solidly connected to the sleeve (5), and (ii) means which, in the mounting/disassembly position and under the action of means that supply a releasing force, release the pressing member (15, 30, 40).
