Abstract (en)

[origin: US2006213800A1] A clamshell package comprises a first portion comprising a first flange partially surrounding a first product receptacle. A first connecting member is connected to the first flange. The package further comprises a second portion comprising a second flange. A second connecting member is connected to and irreversibly separable from the second flange. The first connecting member irreversibly connects to the second connecting member when the first flange is disposed adjacent to the second flange.
