Abstract (en)  
[origin: GB2425212A] A display apparatus comprises a securing assembly 10 for securing the display apparatus to a supporting surface, a display component 12 capable of displaying visible indicia. The securing assembly 10 and the display component 12 can be releasably interconnected and when connected can be pivotally moved with respect to one another. The securing assembly 10 preferably includes adhesive means, which may be covered by a protective membrane prior to the display apparatus being attached to the supporting surface. The securing assembly 10 may comprise a mounting component 14 for securing to the support surface, and a connecting component 34 for attachment to the display component 12, pivotally connected to one another. Preferably the connecting component 34 includes formations (36, fig 1) that can be passed through apertures in the display component 12 or alternatively the connecting component 36 has formations, such as flexible tabs, that can grip and edge portion of the display component 12. The display apparatus can be provided in kit form.
