Abstract (en)
[origin: EP1878362A1] The frame (1) has a head rest (4) highly movable opposite to a back part (3) in the direction of a head end (2a) of a base frame (2), where the head rest is movably guided at its longitudinal sides in elongated holes (8) of guiding plates (9) by pivoting fittings (5), which are coupled with the back part. The plates are retractable from a normal position around a preset amount of angle opposite to the back part, and the head rest is movable in the direction of the head end after reaching a maximum leading position with simultaneous pivoting of the back part.
