Abstract (en)

[origin: EP1878377A1] Dishwasher filter (1) including a flared annular portion (6) and a peripheral edge (8'), in which said edge (8') includes a wall (10) substantially inclined downwards and toward the center of the filter (1). In this way, it is possible to prevent large residues potentially harmful for the dishwasher hydraulic circuit from accumulating at the peripheral edge (8') of the filter (1) and falling inside the underlying sump when the filter (1) is pulled out of its seat (2) during the maintenance phase.
