Abstract (en)
A hockey stick (10) includes a head (20) and a handle (30). The head (20) has a batting face (22). The handle (30) has five through holes (32). The axes of the through holes (32) extend parallel to a normal direction of the batting face (22) of the head (20). Thus, the air passes the through holes (32) of the handle (30) when user waves the hockey stick (10) so as to reduce the resistance to the air and enhance the flexibility of the handle (30).
